

Collagen Induction Therapy

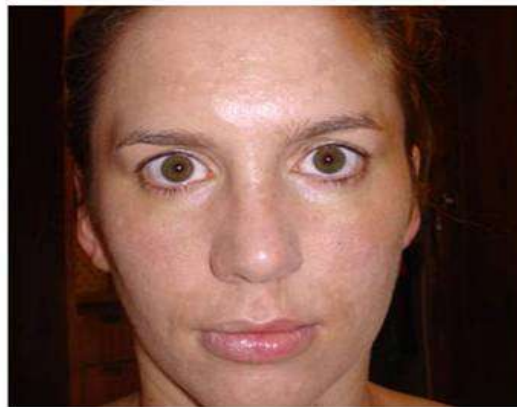

Before

Post 4 Treatment

- Collagen Induction Micro-Needling **Acne Treatment**. This Collagen Induction Micro-needling treatment is designed to regulate the skin's sebum production while reducing scar tissue, hyper pigmentation, active breakouts and refining the pores. This is a treatment for acneic to oily skin types. We recommend 3-6 treatments, with a 4-6 week interval between for best results.

Before and after treatment

- New Collagen Induction Therapy (CIT) for **hyper-pigmentation**. Micro-needling therapy with anti-pigmentation care. Fitting for all types of skin, this luxurious marriage of state-of-the-art micro-needling technology combined with medical grade skin care products to restore youthful skin and to reduce hyper pigmentation of skin. The micro-needling is used to penetrate serums into the skin. Collagen Induction Therapy provides up to 200x more penetration of active ingredients into your skin than any other skincare treatment. There is little to no downtime or recovery time following this facial rejuvenation treatment. Patients should expect their treatment to take 60 min. Skin will feel moisturized and glow with improved firmness and radiance.

- New Collagen Induction Therapy (CIT) for skin cell rejuvenation. Micro-needling therapy with **anti-aging** care. We recommend 3-4 treatments, with a 4-6 week interval between for best results. This is a medical spa treatment for all skin types. Collagen Induction Therapy is the luxurious marriage of state-of-the-art micro-needling technology combined with topical medical grade skincare. Micro-needling is a non-invasive, safe, all-natural cosmetic procedure. It activates stem cells to produce growth factors that create new, plump, healthy skin. Micro-needling therapy increases new collagen & elastin fibers by 1000%! The treatment is designed for reducing deep wrinkles and fine lines. Your skin will look instantly rejuvenated when you finish your first Collagen Induction Therapy. But that's only the beginning. Your skin will continue to improve over the next days and weeks as collagen and elastin is built up deep within your skin's structure.

- New Collagen Induction Therapy (CIT) for **Stretch marks**. Stretch marks are deep tears or rips through the deep skin layers and contain scar tissue which is tough. Micro-needling therapy penetrates through the scar tissue and stimulates the natural wound healing process. This healing response will stimulate the production of new collagen & elastin fibers. This collagen formation helps to smooth and fill a stretch mark. Several treatments would be needed depending on the age and depth of the stretch marks.
